[🔑](#) LeetCode [🔑](#) ClickTrap Awareness

SUMMARY

Cybersecurity student pursuing B.Sc. Computer Science with Cybersecurity, with strong knowledge in network security, vulnerability assessment, threat detection, incident response, and system hardening. Hands-on experience through security labs, CTF challenges, and practical projects using Nmap, Wireshark, Burp Suite, Metasploit, Linux, Docker, and Python. Built security-focused tools including an Endpoint Detection & Response (EDR) platform and phishing awareness simulator. Seeking an entry-level Cybersecurity Analyst / SOC Analyst role to support enterprise security operations.

EDUCATION

B.Sc. Computer Science with Cybersecurity	2024 – 2027
Focused on network security, ethical hacking, threat analysis, incident response, and hands-on cybersecurity lab projects.	Rathinam Technical Campus

TECHNICAL SKILLS

Network Security Skills - Nmap (port scanning, service enumeration) - Wireshark (packet capture, traffic analysis)	Web Security Skills - Burp Suite (request/response testing) - OWASP Top 10 awareness
System & Exploitation Skills - Linux security administration - Windows users, permissions, services - Metasploit (controlled exploitation practice) - Vulnerability assessment fundamentals	Core Programming & Security Knowledge • IP addressing, ports, subnetting • Incident response and secure coding • Python , Bash scripting • React, Spring Boot, REST APIs

PROJECTS

- RedAlert EDR– Endpoint Detection & Response Platform** [🔗](#), *Linux, Python*
- Built offline EDR system for real-time monitoring of processes, network activity, and system events.
 - Implemented threat detection and alerting for suspicious behavior analysis.
- ClickTrap – Security Awareness Simulator** [🔗](#), *Python, Linux, Shell Scripting*
- Built social engineering simulation tool using disguised file execution techniques.
 - Delivered real-time user awareness training through instant security feedback.
- SQLi-Report – SQL Injection Assessment Tool** [🔗](#), *Python, CLI*
- Contributed to CLI design and core modules for SQL injection detection.
 - Developed terminal interface and automated reporting for vulnerability analysis.
- DNS Lab (Dockerized)** [🔗](#), *Docker, Networking*
- Created isolated DNS environment for resolution, caching, and query analysis practice.
 - Performed protocol testing and troubleshooting in controlled lab setup.
- Authify - Authentication System** [🔗](#), *React, Spring Boot*
- Developed secure authentication system with OTP login and email verification.
 - Implemented REST APIs for user authentication and session management.

CERTIFICATIONS

Google Cybersecurity Certificate, Packt Web Security & Ethical Hacking, Linux Foundation – Linux Tools, AWS Fundamentals – Whizlabs, Meta – HTML & CSS in Depth

Awards

- Cybersecurity Achievement**, *TryHackMe*
- Maintained a 114+ day continuous learning streak with consistent cybersecurity lab practice and ranked in the top 6% globally based on performance in hands-on security challenges.
- Problem Solving Achievement**, *Leetcode*
- Solved 280+ data structures and algorithm problems, demonstrating strong problem-solving skills and consistent practice in coding challenges.
