CAREER OBJECTIVE

Cybersecurity-focused Full Stack Developer with strong knowledge of network security, system security, and application security. Skilled in vulnerability assessment, log analysis, and incident response using industry tools and techniques. Strong understanding of TCP/IP, OSI model, and OWASP Top 10. Focused on identifying threats, improving system security, and building secure, production-ready applications.

PROFESSIONAL EXPERIENCE

Full Stack Developer, Dream Lumin Studio 01/2026 – 02/2026

- Developed full-stack applications using React and Spring Boot with REST API integration
- Built responsive UI components and secure contact form with backend email functionality
- Applied secure coding practices including input validation and safe data handling
- Ensured performance optimization, scalability, and cross-browser compatibility

EDUCATION

B.Sc. Computer Science with Cybersecurity — Rathinam Global Deemed to be University 07/2024 – Present

- CGPA : 8.53
- Focused on network security, ethical hacking, threat analysis, and incident response
- Completed hands-on cybersecurity lab and practical security projects

TECHNICAL SKILLS

Network Security • TCP/IP, OSI model, packet flow analysis, network architecture • Network protocols (HTTP, HTTPS, DNS, DHCP, FTP) • Subnetting, routing concepts, IP addressing • Nmap (scanning, enumeration), Wireshark (traffic analysis)	System Security • Linux system administration, system hardening • Windows security • Metasploit Framework • Vulnerability assessment, risk analysis, threat identification • Security monitoring, logging, incident response • CIA triad, defense-in-depth, least privilege access control
Web Application Security • OWASP Top 10 (SQL Injection, XSS, CSRF, IDOR) • Burp Suite (request interception, response analysis, vulnerability testing) • Authentication & authorization (sessions, JWT, tokens, access control) • Web security testing, vulnerability assessment concepts • Secure communication (HTTPS, encryption basics)	Programming & Tools • Python, Bash scripting, Java • React frontend development, component-based UI design • Spring Boot backend development, REST API design • Secure application development, debugging practices • Security automation and scripting • Security logging and analysis fundamentals

PROJECTS

- RedAlert EDR– Endpoint Detection & Response Platform, Linux, Python**
- Built offline EDR system for real-time monitoring of processes, network activity, and system events.
 - Implemented threat detection and alerting for suspicious behavior analysis.
- ClickTrap – Security Awareness Simulator, Python, Linux, Shell Scripting**
- Built social engineering simulation tool using disguised file execution techniques.
 - Delivered real-time user awareness training through instant security feedback.
- SQLi-Report – SQL Injection Assessment Tool, Python, CLI**
- Contributed to CLI design and core modules for SQL injection detection.
 - Developed terminal interface and automated reporting for vulnerability analysis.
- DNS Lab (Dockerized), Docker, Networking**
- Created isolated DNS environment for resolution, caching, and query analysis practice.
 - Performed protocol testing and troubleshooting in controlled lab setup.
- Authify - Authentication System, React, Spring Boot**
- Developed secure authentication system with OTP login and email verification.
 - Implemented REST APIs for user authentication and session management.

CERTIFICATES

Google Cybersecurity Certificate • SOC fundamentals, threat detection, incident response	Packt Web Security & Ethical Hacking • Web application vulnerabilities and exploit development basics	Linux Foundation – Linux Tools • Linux administration, command-line interface, system security basics
AWS Fundamentals (Whizlabs) • Cloud computing fundamentals, AWS core services, and cloud architecture concepts	Meta – HTML & CSS in Depth • Frontend development, responsive design, UI/UX fundamentals	Pre Security - Tryhackme • Networking fundamentals (TCP/IP, ports), system basics, and cybersecurity mindset

INTERESTS

Cybersecurity research, ethical hacking, vulnerability analysis, and Capture The Flag (CTF) security challenges
